

PROINERT² – THE

NEXT GENERATION

OF INERT GAS

FIRE SUPPRESSION

Fike[®]

ProInert ... The Most VERSATILE and COST-EFFECTIVE Inert Gas System

Inert gas systems are the safe, natural way to extinguish a fire. Fike's PROINERT offers all the benefits of other inert gas systems, but with design improvements that make ProInert a safer and more economical solution. And now PROINERT² offers actuation at the valve, eliminating the need for additional hardware. This not only simplifies the actuation process, it reduces costs and on-going maintenance.

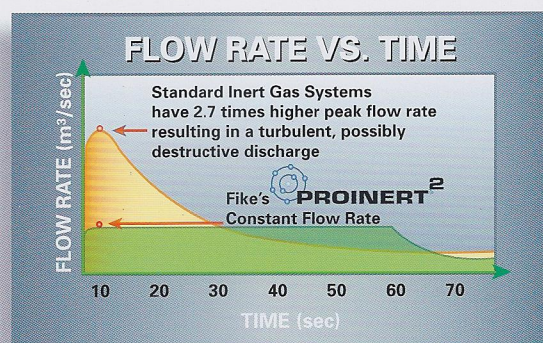

ProInert ... How it Works

Most inert gas systems discharge from the containers at high pressure, using pressure reducers further down the pipe network and requiring the use of expensive, high-pressure piping through much of the system.

CONSTANT FLOW RATE = CONSTANT SAVINGS and CONSTANT SAFETY

PROINERT² is different.

Our superior cylinder valve automatically reduces the pressure of the extinguishant at discharge. We provide an ideal discharge pressure and maintain a constant flow rate throughout the system. **With PROINERT², you can use small-diameter, low-pressure piping from the container to the nozzle – lowering your system costs.**

LOWER PRESSURE = LOWER COSTS and LOWER RISK

In addition, industry regulations state that 95% of the required inert agent must discharge within 60 seconds after activation. To achieve that discharge rate, our competitors' inert systems must increase their already high surge flow rate, increasing the risk of damage. Consequently, a large venting area must be installed, to protect the integrity of the protected space and the employees.

NO EXCESS EXTINGUISHANT = NO EXCESS EXPENSE and EXCESS RISK

PROINERT² is better. Because of our unique, patented valve assembly, the **PROINERT²** agent enters the protected room within the required 60 seconds at a steady flow rate, preventing destructive turbulence from occurring. Therefore, only the amount of extinguishant you really need is discharged, and the necessary venting area is much smaller — reducing your installation costs by as much as 60% on venting hardware!

PROINERT² ... safe, cost-effective inert gas fire suppression

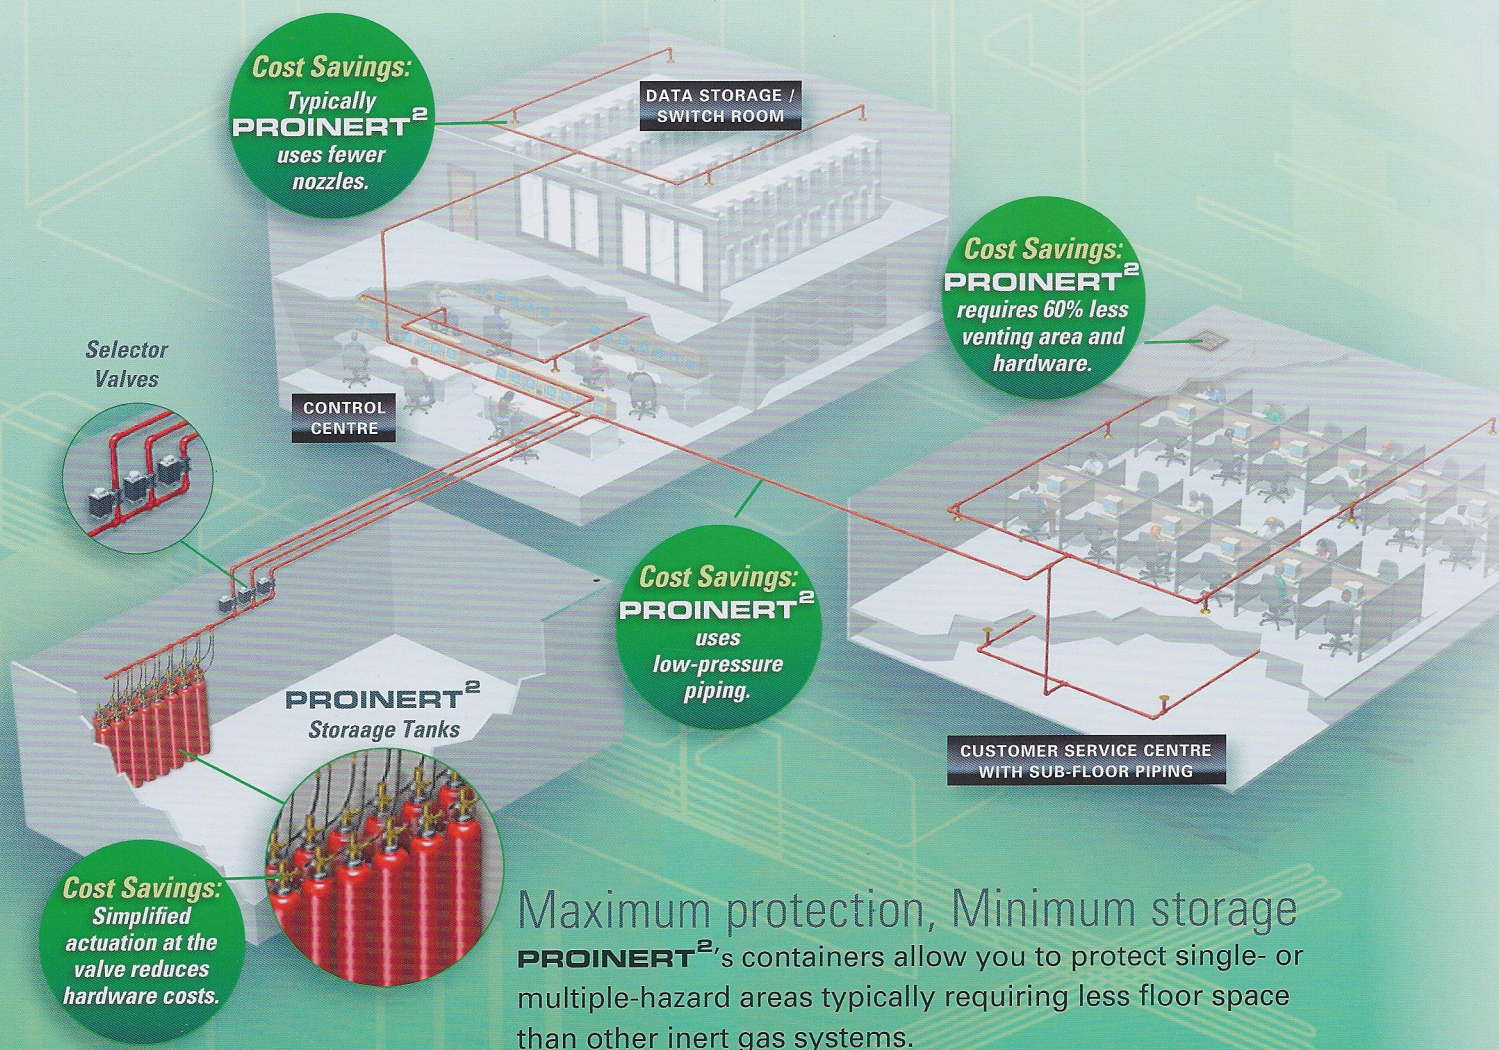

Protection with NO boundaries from **HERE** to **THERE**

Fike's **PROINERT²** system is designed for superior long-distance delivery. Our storage containers and selector valves enable you to protect several rooms with one bank of containers stored far from the protected areas. **PROINERT²** containers can be placed in virtually any non-critical area.

Think of the cost savings!

You no longer need to purchase, install and maintain several individual protection systems for your multi-risk facility.

One **PROINERT²** system does it all.

Beyond ProInert²... Fike is a Global Leader in Fire Suppression

A global leader in fire suppression, Fike offers a full range of fire suppression products for all your industrial, commercial, and special hazard applications. Our fire protection systems are effective, easy-to-use, and safe for people, key assets, facilities and the environment. And whether you need innovative fire suppression, replacement of an outdated system or dedicated protection of a key asset, Fike will analyse your operation and help you determine the correct fire protection for all your business applications.

In addition to the superior technology of the PROINERT² fire suppression systems, Fike has developed a full line of leading edge systems for a variety of applications.

Clean Agent Fire Suppression Systems with Impulse Technology

The Fike **Impulse** Valve technology greatly improves the performance of clean agent fire suppression systems over mechanical valve systems by combining the reliability and efficiency of a rupture disc and the flexibility of electric actuation. And the **Impulse** Valve is capable of firing up to 4 cylinders on a single circuit – making systems with this advanced actuation more cost-effective to design and install.

FIRERASER[®] Small Space Fire Protection

Fireraser provides economical, on-board fire suppression for everything from computer cabinets (in-cabinet fire suppression) to CNC machines, medical imaging equipment, electrical closets and even small data centres.

From Art to Industry

PROINERT² is the ideal fire protection solution for a wide variety of industries and applications.

- Art Galleries
- Museums
- Archive Storage
- Computer/Operation Rooms
- Control Rooms
- Financial Centres and Banks
- Electronics and Data Processing
- Insurance Industry
- Military Installations
- Pharmaceutical/Medical
- Process Industry Control Rooms
- Rare Book Libraries
- Record Storage Facilities
- Substation Control Rooms
- Switch Rooms
- Telecom Centres
- Universities and Colleges

Fike[®]

PROINERT²

expands your choice of inert gases

An inert gas extinguishing system is designed to reduce the oxygen concentration inside the protected hazard until it reaches a level where combustion is no longer supported. **PROINERT** was first introduced using IG-55, a blend of Argon & Nitrogen. **PROINERT²** now offers an additional 3 inert gas options for those customers who prefer alternative agents.

IG-55 – Argon & Nitrogen

IG-541 – Argon, Nitrogen & CO₂

IG-100 – Nitrogen

IG-01 – Argon

Each of the gases is environmentally inert with all the benefits of an all-natural extinguishant option:

- **Zero Ozone Depletion Potential (ODP):**
When released, they automatically return to their natural place in the environment.
- **Zero Global Warming Potential (GWP):**
No atmospheric lifetime, so no risk to the environment.
- **Suitable for Occupied Spaces**
- **Exceptional Extinguishant Hold Time:**
Minimal Room Sealing Required.
- **Easy, Economical Refill:**
Gases occur naturally in the environment.
- **No Secondary Combustion Products:**
Making it a safe choice for people and assets.
- **No Residue:**
No damage to your equipment and no clean-up required.

*No matter which inert gas option you choose, with a **PROINERT²** system, you receive all benefits from our exclusive constant flow rate valve featuring actuation at the valve.*

To complete your
PROINERT² system

High-X Vents

While inert gas fire suppression systems are an excellent, environmentally sound means of protecting key assets and rooms, one thing is clear, adding an additional 50% volume into a protected space (the fire suppressant agent) will cause a pressure increase. This can cause damage to the room, if not vented.

With Fike's unique High-X vents, pressures are kept within acceptable levels and the gas remains in the protected space for the required time, to allow the fire to be completely extinguished. Fike provides all you need – from starting calculations to installation details. Efficiency, cost-effectiveness and ease of use – you get it all with Fike HIGH-X vents and PROINERT inert gas fire suppression.

High-X, for the most economical choice in fire suppression venting.

- Fully Open at 95.5 Pascals
- Full European and US Fire Test Approval
- Fewer and smaller vents necessary
- Less construction time

Fike[®]

WE'RE PROUD OF OUR RESUME

EXPERIENCED: We've worked in the fire protection business since 1960.

FOCUSED: We specialize in Life Safety Products, as well as Facility and Asset Protection Products.

VERSATILE: We design, manufacture, distribute and maintain our entire product line.

GLOBAL: We have clients, manufacturing facilities, sales outlets and maintenance companies around the world.

INNOVATIVE: In 1994, we became the first manufacturer to bring a UL Listed and FM Approved, clean agent fire suppression system to market, replacing Halon. We also have the safest and most economical inert gas system on the market - **PROINERT**.

EARTH-FRIENDLY: We pioneered the development of clean agent systems and we continue to explore environmentally safe alternatives such as inert gas.

COMPREHENSIVE: We offer a complete line of fire protection technologies including clean agents, watermist, CO₂, plus the corresponding detection and control systems.
